Routing Table

Explanation:

-When a user clicks a link, Angular checks the invoked path and checks if it has a paired value in its routing table. If it does, angular will go fetch the relevant layout and display it to the screen without replacing the side bar menu. (see the diagram above for illustration)

Tasks Completed:

-Non-admin users can now apply for Scholarship, claim role, apply for mentorship program, receive announcements and track their applications. They can track their offers, cancel applications and re-apply for positions.

ToDo:

-Send email notifications, start admin section and finish up other remaining non-admin tasks.

Request (front-end):

-All designs to be placed in the /layout folder.

-Save them as layoutName.htm
